

EARLY WARNING SYSTEM FOR CHEMICAL RISKS

NORMAN VIEW

Valeria Dulio, Jaroslav Slobodnik

Tools
developed
by NORMAN
to support
Early
Warning
System

Results of
prioritisation runs
using the **NORMAN
Prioritisation
Framework** incl.
NTS data

Exploitation of data
'**NORMAN Digital
Sample Freezing
Platform**' (DSFP)
substances flagged
for 'potential risk' in
various matrices

Outcomes of
reported **EDA**
studies: substances
exceeding the
ecotoxicology
threshold values

Norman Early
Warning System
(**NORMANews**)

NORMANews

NORMAN Early Warning System

2) Identification criteria are sent to other labs in the network (retrospective analysis)

Exploring the Potential of a Global Emerging Contaminant Early Warning Network through the Use of Retrospective Suspect Screening with High-Resolution Mass Spectrometry

Nikiforos A. Alygizakis,^{†,‡,•} Saer Samanipour,^{§,•} Juliane Hollender,^{||,•} María Ibáñez,[#] Sarit Kaserzon,[¶] Varvara Kokkali,[∇] Jan A. van Leerdam,[○] Jochen F. Mueller,[¶] Martijn Pijnappels,[◆] Malcolm J. Reid,[§] Emma L. Schymanski,^{||,◇,•} Jaroslav Slobodnik,[‡] Nikolaos S. Thomaidis,[†] and Kevin V. Thomas^{*,§,¶,•}

3) Frequently found ?

4) If it is frequently found → Warning

MassBank Record: KO001419

1) One lab identifies a new contaminant

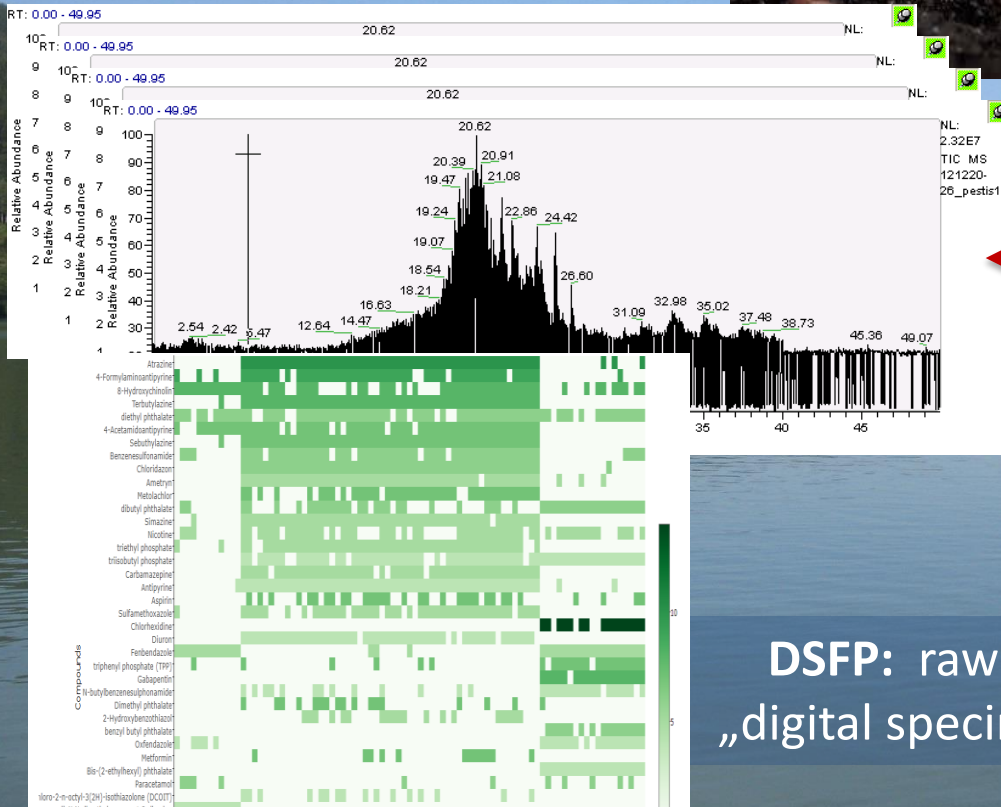

ACCESSION: KO001419
 RECORD_TITLE: (3)-Mandelic acid; LC-ESI-QQ
 DATE: 2011.05.10 (Created 2007.07.07)

NORMAN DSFP

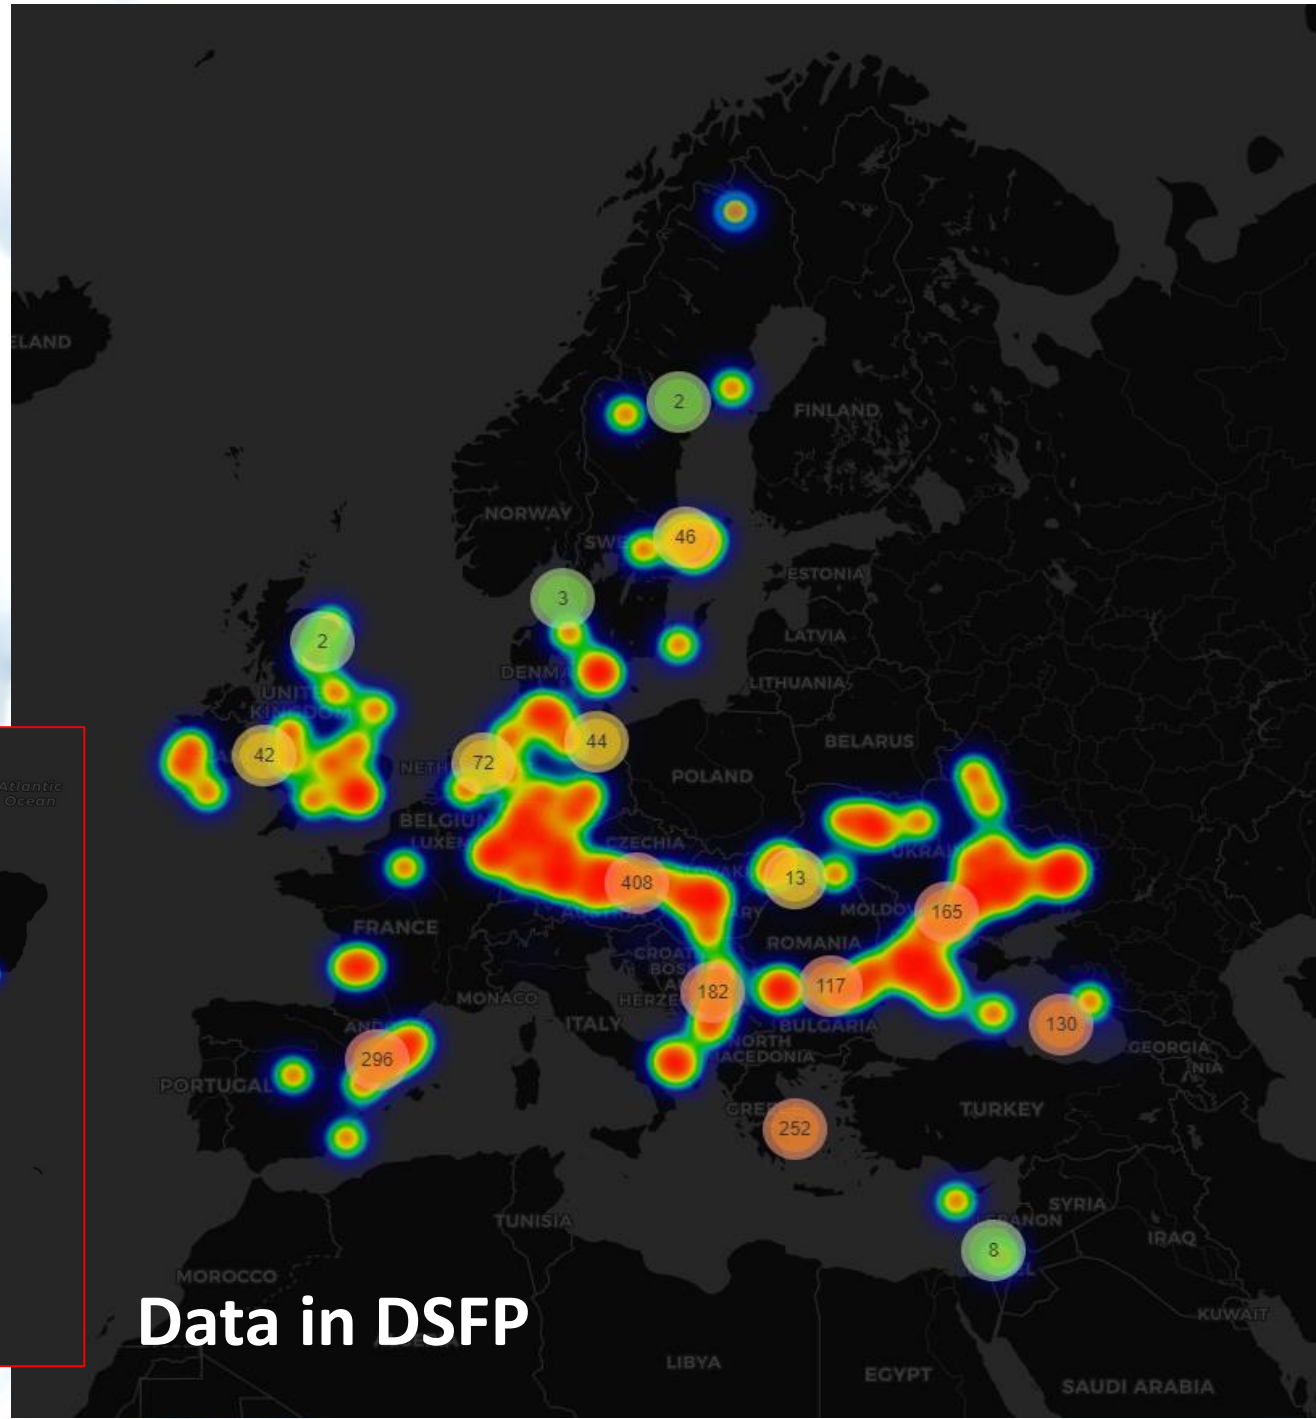

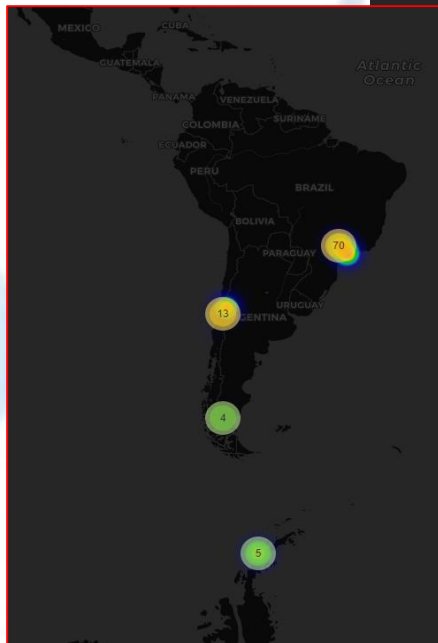

DSFP: raw HRMS data of samples stored in a „digital specimen bank“ for retrospective analysis

- **Spatial distribution of contaminants**
- **Exceedance of threshold values**
- **Increasing trends**

NORMAN Early Warning System

Data in DSFP

Early Warning System

'Signal' - a manifestation of an emerging chemical issue or risk by measurement or observation, providing information on its nature, sources and causes. (WHO Chemical risk assessment network workshop, 20-21 February 2019, Bilthoven, The Netherlands)

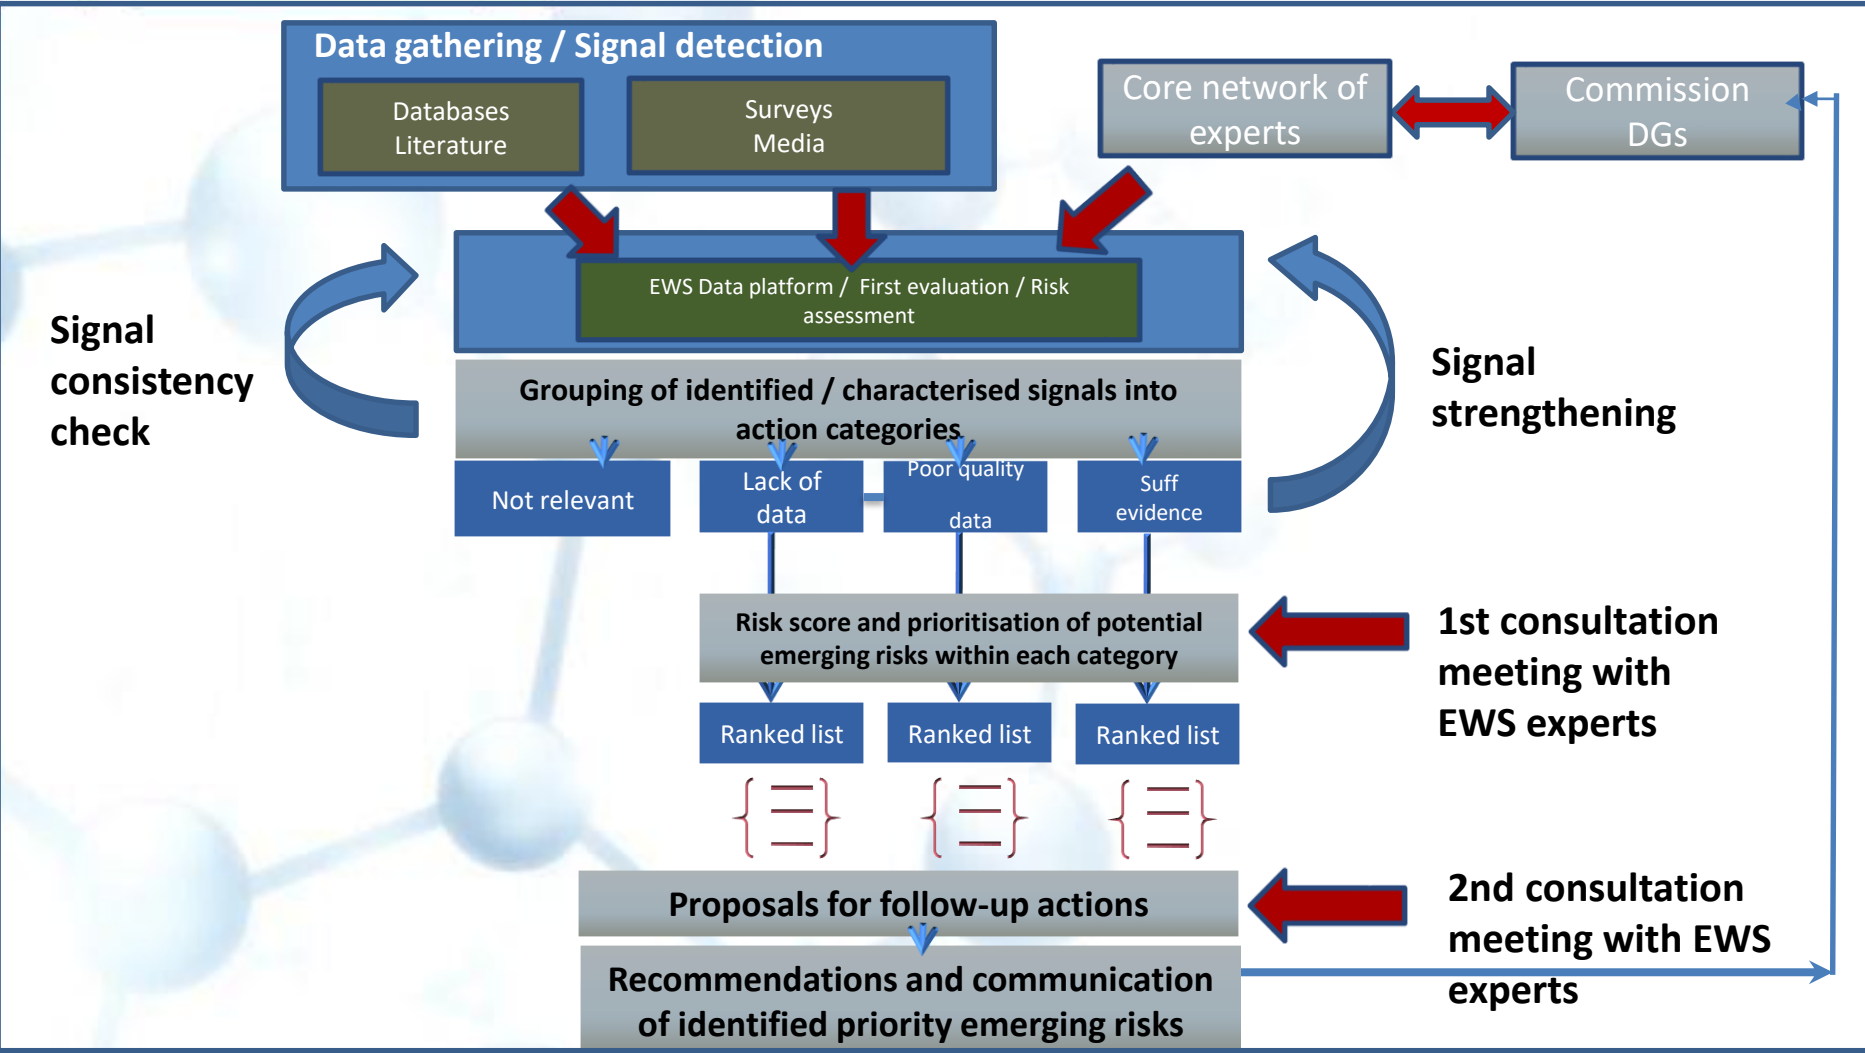

- **IMPORTANT: data** to correctly identify an emerging risk at an early stage are **typically limited or of poor quality**.
 - Use a transparent and rational approach for signal identification and characterisation that is able to deal with knowledge gaps

Categorise early warning signals

Early warning signal is **currently not of concern**
based on the available information

Concern related to a particular early warning
signal is insufficiently evidenced and **should be
further assessed** when information becomes
available

Early warning signal has been recognised to be of
concern and should be submitted to a proper
assessment and **to regulatory action(s)**

NORMAN EWS objectives

- Identify substances with:
 - **Evidence of exposure and potential risk**
 - **Knowledge gaps** that prevent appropriate risk assessment and management measures
- **Optimised use of novel tools:**
 - NTS = wide-scope target & suspect & non-target screening
 - Existing databases
 - Literature data
 - Modelling tools
 - Biological tools and/or virtual EDA
- To obtain **more exhaustive analysis of:**
 - **The current status of knowledge**
 - **Future trends** for a large list of chemicals as **individual compounds and as mixtures**

Actions ?

- Actions organised by NORMAN vs actions to be performed under pilot EWS of DG ENV?
- Best way to collaborate?
