

Proposals for NORMAN Joint Programme of Activities 2023

Title	Interlaboratory studies on pharmaceuticals and alkylphenols
Type of activity	ILS
Leader	IWW Centre of water
Topic / activities	<p>Background / Justification for the proposed activity:</p> <p>There are increasing reports about the occurrence of these substances in the aqueous environment: in surface water, groundwater and for some of them even in drinking water. Reliable analytical methods are needed in order to better assess the current situation and to investigate the effectiveness of several measures (such as advanced wastewater treatment) to reduce emission of these substances into surface waters. However, for these substance groups there are no European or internationally harmonised or standardised analytical methods available so far, and a thorough assessment of the suitability of different analytical methods used is still lacking.</p> <p>Description of the proposed activity and expected outcomes for 2023:</p> <p>Together with AQS BW, IWW Water Centre will organise interlaboratory studies on these compounds in drinking water.</p> <ul style="list-style-type: none"> • The ILS on pharmaceuticals for spring 2023 • The ILS on alkylphenols 2023. <p>Parameters will be announced later.</p> <p>The studies will combine proficiency testing of laboratories and evaluation of the suitability of methods used.</p> <p>Expected outcomes for 2023:</p> <p>Comprehensive report on the outcome of the interlaboratory studies with conclusions on</p> <ul style="list-style-type: none"> • the proficiency levels of European analytical laboratories • the suitability of analytical methods for analysis of these two compound classes in water samples. <p>Added value / Link with other NORMAN activities and / or other projects</p> <p>The added value will be an increased knowledge about the suitability of analytical methods and the proficiency level of European laboratories to monitor these compound groups in the aqueous environment.</p>
Participants	Any interested laboratories. The ILS will be carried out as a proficiency test anyway within Germany (we expect participation of approx. 20-30 laboratories), but we propose to extend these ILS towards non-german members (NORMAN members but also beyond).
Proposed contribution	IWW proposes these ILS as its annual in-kind contribution, in order to qualify for the reduced membership fee in 2023. Costs for organising these ILS will mostly covered by a participation fee for the ILS. Hence, the in-kind contribution of IWW (and the co-organiser) is related mainly to the additional effort caused by having non-german participants (all material to be produced in English language in addition to the German version) and to the additional effort for method-specific evaluation of data (not part of the standard German ILS which is mainly focussing on proficiency testing of labs).
Contribution needed from NORMAN Association¹	Dissemination of information about the ILS (announcement/invitation, registration form etc) through the NORMAN website and other dissemination channels. No financial contribution needed.

¹ Please, provide here a transparent justification of the requested resources and of the in-kind contribution, thereby distinguishing between the costs associated with "person-months" for the organisation, the "travelling costs" for invited speakers and the costs for the logistics (e.g. meals, room rental etc.)
